

Pose Models

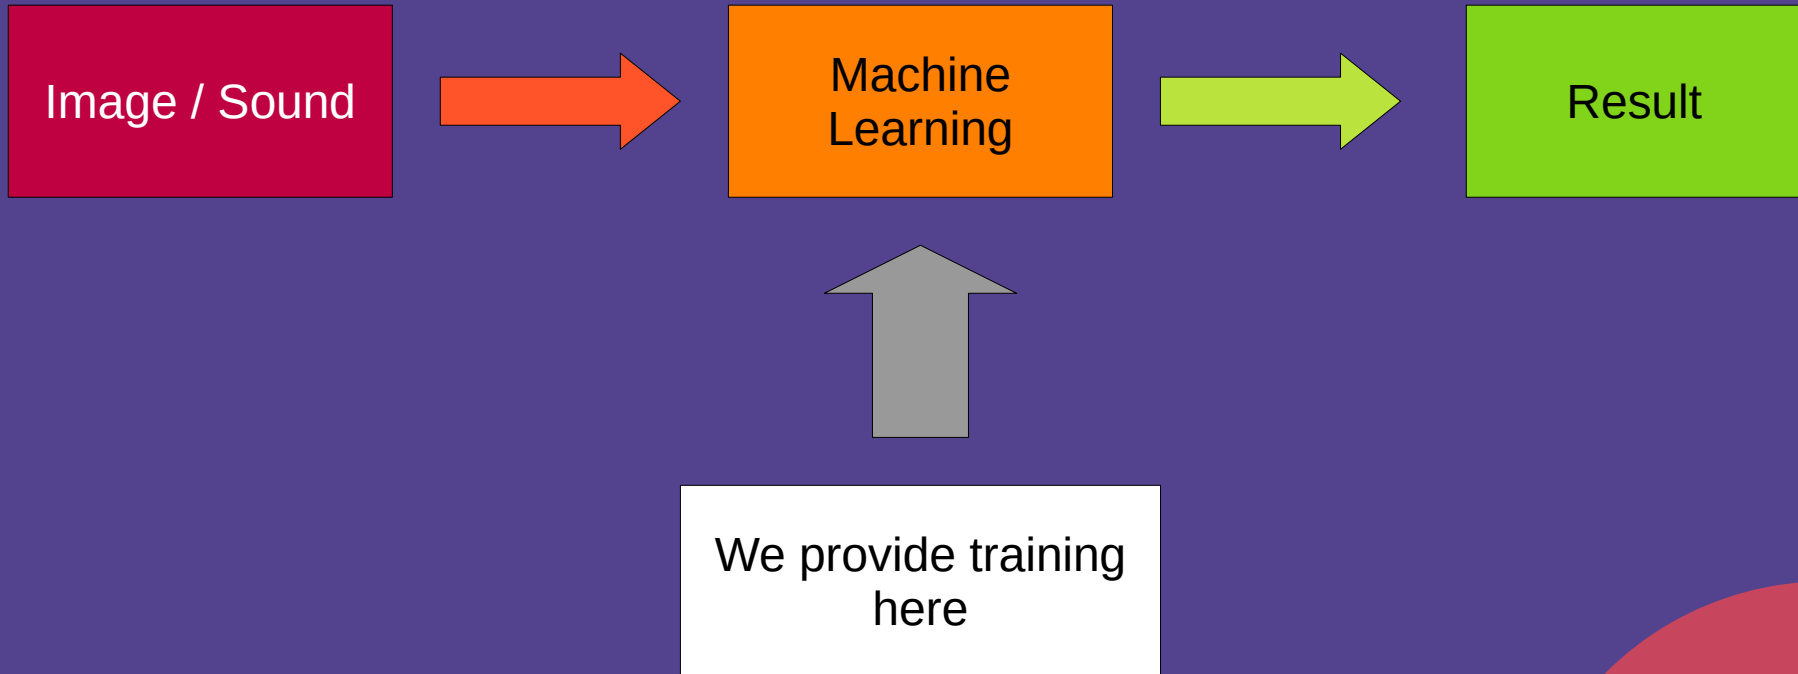

Pose Model

- Trains the machine to classify different types of Pose
- Process:
 - 1) Provide samples of the pose
 - 2) Tell the machine what each pose means
 - 3) Teachable machine will train the model
 - 4) Use the model file in your program

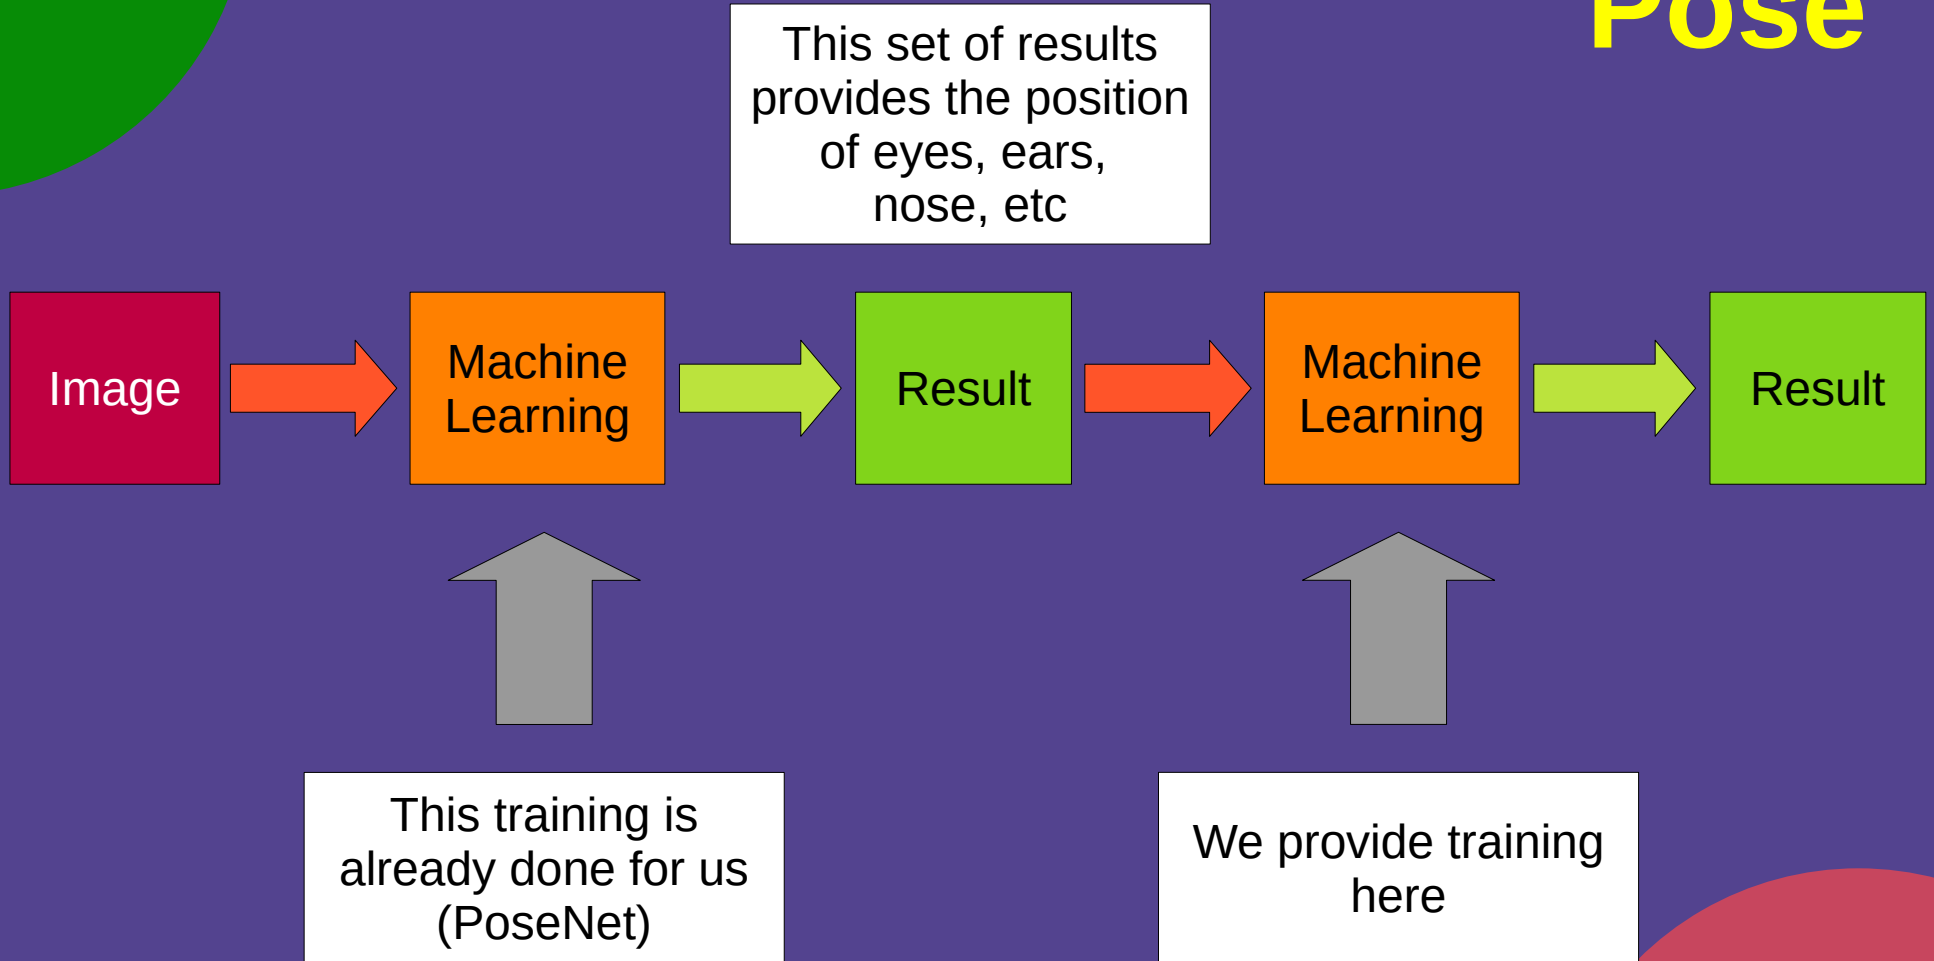

How it works?

- A little different from the rest...
- Two stage process

Image and Audio

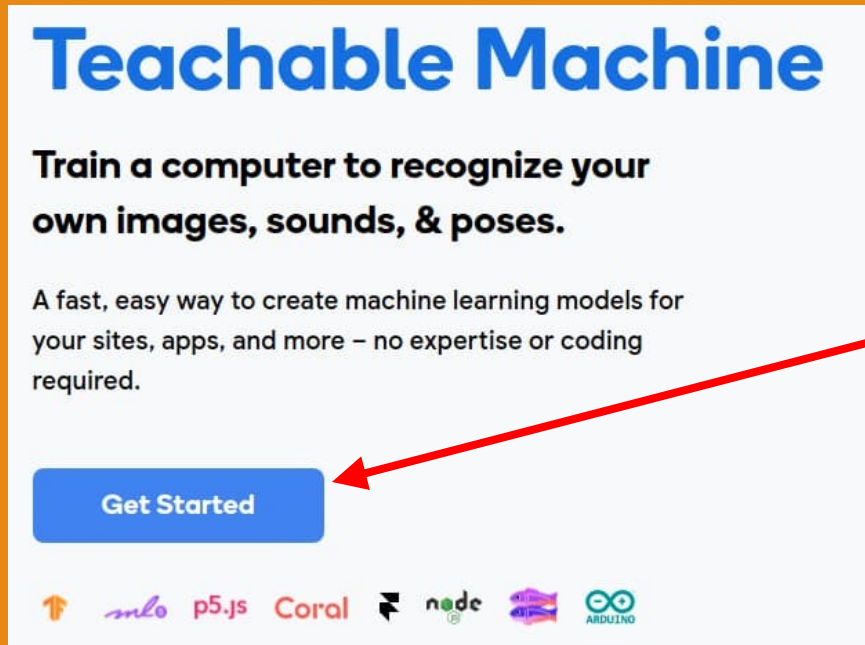

Pose

Teachable Machine

- Open <https://teachablemachine.withgoogle.com>

Teachable Machine

Train a computer to recognize your own images, sounds, & poses.

A fast, easy way to create machine learning models for your sites, apps, and more – no expertise or coding required.

[Get Started](#)

↑ ml5 p5.js Coral ↩ node 🐟 ARDUINO

Click “Get Started”

Teachable Machine

- Select
“Pose Project”

Pose Project

Teach based on images, from files or your webcam.

Sample Pose

- Give your class a suitable name
- Add more classes if you require it

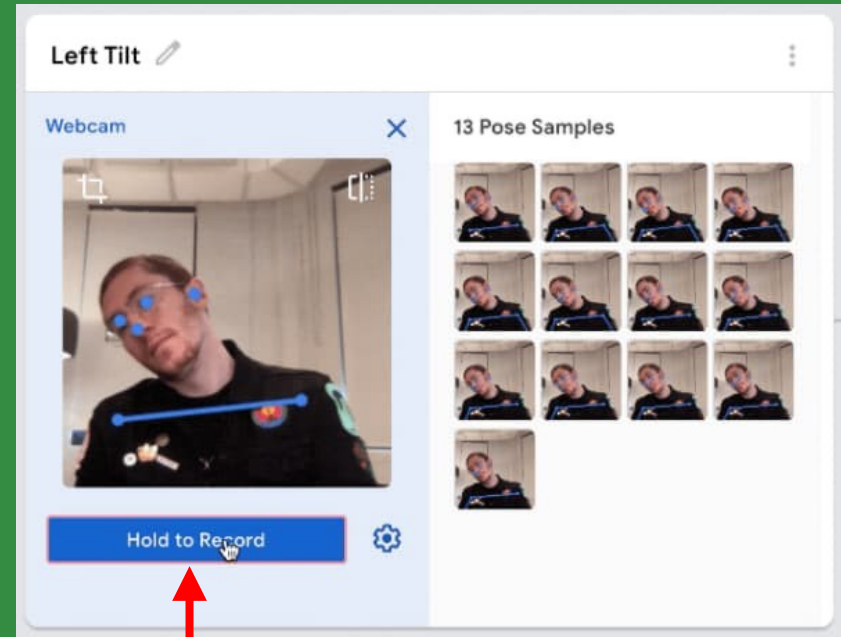

Sample Pose

- Click on the “Webcam” to record
- You can also record with your phone camera and upload it

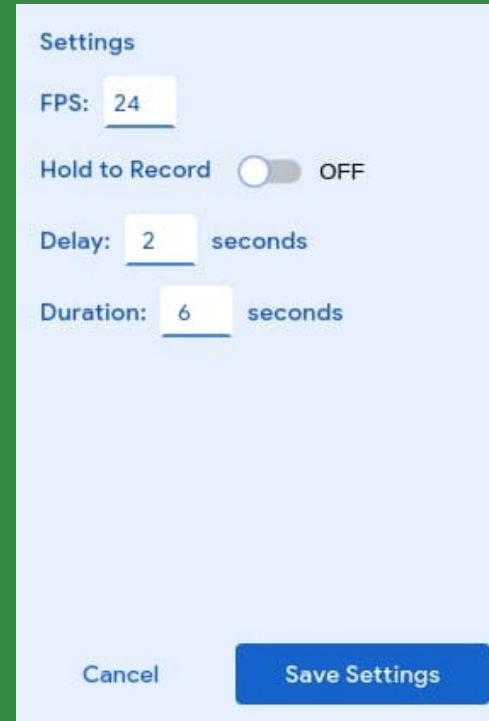

Sample Pose

- You may need help from a classmate to click record, while you perform the pose

Sample Pose

- Alternatively, click the gear icon to change settings, then
 - Turn off “Hold to record”
 - Set a delay
 - Set a duration
 - Click “Record” then perform your pose before the delay ends

Train and Test

- Train the model
- This may take a while to complete

Train and Test

- Test out the model
- Make sure it works correctly
- Record more samples if needed

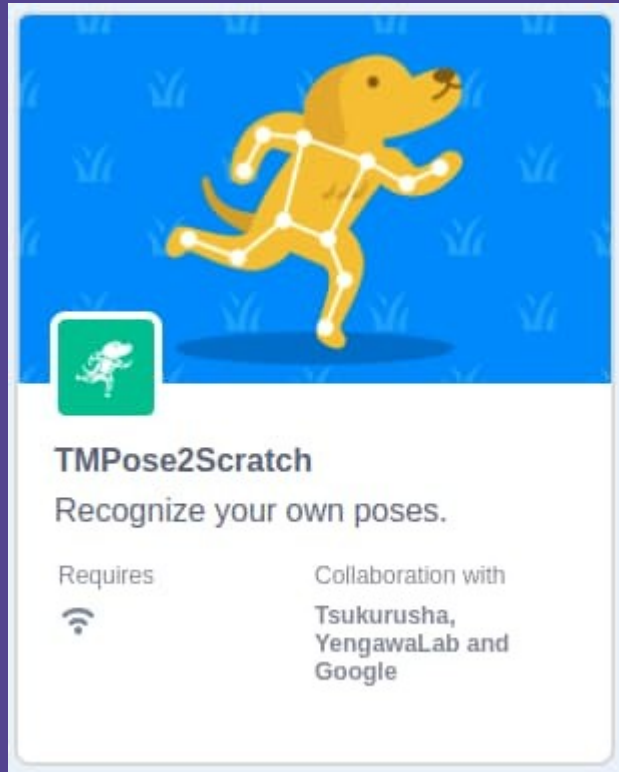

- Distance matters! Train at different distances from the camera
- Train with slight differences in pose (eg. Tilt your head at different angles)
- Have a “Nothing” pose
- As always, increasing epoch can help

Tips

Experiment

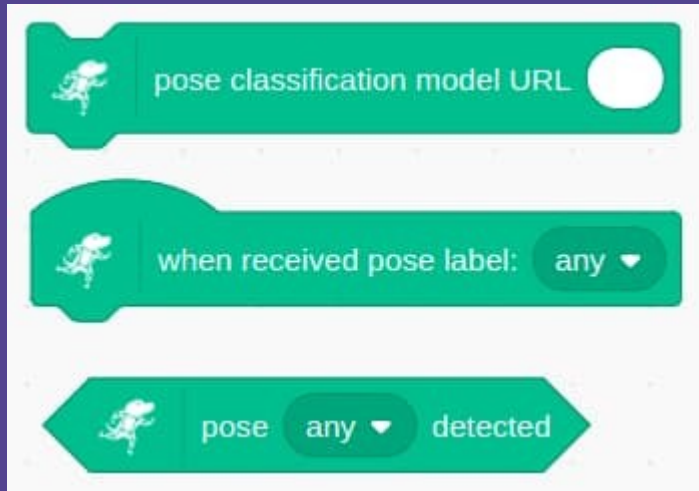

- Does it work with different people?
- How does having multiple people in view affects the training and results?
- Can you train it to differentiate between two people and one person in the camera view?

Adding the Extension

- Open <https://stretch3.github.io/>
- Add the “TMPose2Scratch” extension
- IMPORTANT! You should not have both the “TMPose2Scratch” and “TM2Scratch” extensions at the same time

Using the Extension

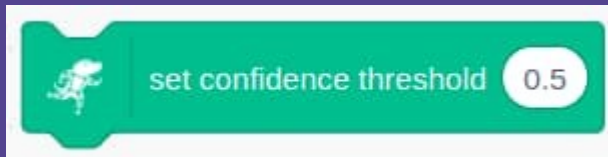

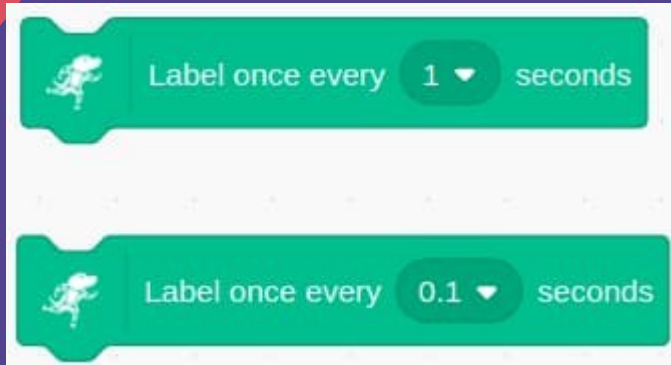

- Load the model URL; you only need to do this once
- Detect pose using the “when received pose” or the “pose detected” blocks

Twin Bee

- Vertical Shooter
- Use pose to control plane
- Plane should shoot continuously (...no need to press anything)
- Controls are up to you. You decide whether to have...
 - Left / Right only
 - Left / Right / Up / Down
 - Slow Left / Fast Left / Slow Right / Fast Right
 - Etc

Tips

- For a fast paced game, you'll probably want to label more often
- Adjust the confidence threshold
 - False Positives: Increase threshold
 - False Negatives: Decrease threshold
